

Supplier Evaluation Policy

ELE Forsa's business concept is to create long-term business relationships with suppliers. We value honesty and cooperation with common goals more than making temporarily deals to gain short-term profits.

Suppliers to ELE Forsa AB should have a policy that is not in conflict to our *Human Rights and Working Condition Policy*. Evaluation areas of extra magnitude are:

Sustainable Resources

Supplier should be aware and take actions to assure the usage of sustainable resources. Raw materials for products should be selected from a sustainable perspective. Wood raw material must be traceable. Production methods shall be state-of-the-art concerning environmental impact. Waste should continuously be reduced. Use of renewable energy sources is an evaluation factor.

Business ethics

The supplier must conduct business free from bribery, corruption, and distorted competition. Supplier should pay attention to any conflict of interests within the whole supply chain.

Environment

The supplier should have a declared environmental profile and constantly minimize its impact on the environment. Chemicals must be properly managed. Reuse and recycling are positive parameters as well as reducing GHG emissions and improving air, soil and water quality.
